Experience

Senior Data & Analytics Architect & Engineer | Vitarts

2016 – Present

- Led data architecture and analytics initiatives aligned with business strategy, promoting corporate governance and data/intelligence assets management.
- Designed and implemented end-to-end data platforms, ensuring scalability, performance, and reliability.
- Acted as a full-stack engineer, developing and maintaining solutions across multiple cloud platforms, programming languages, and frameworks.
- Designed and maintained semantic layers to enable consistent and efficient analytical consumption.
- Managed data infrastructure using Terraform and Kubernetes, ensuring automation, resilience, and high availability.
- Served as a trusted advisor to leadership, supporting data-driven decisions.
- Led technology modernization initiatives, focusing on cloud adoption and big data architectures.
- Executed migrations of complex environments, including multi-cloud scenarios.
- Performed data cleansing, transformation, and preparation for analysis and machine learning model training.
- Developed and applied algorithms for data processing, transformation, and ML.
- Implemented and operationalized generative AI and machine learning solutions.
- Translated complex business problems into scalable, value-driven solutions.

Stack:

AWS, GCP, Kafka (Confluent), Kinesis, Pub/Sub, Apache Flink, Apache Spark, Dataflow, Lambda, Cloud Run, Glue, Athena, Data Lake, Data Warehouse, BigQuery, Databricks, Python, SQL, Java, C#, Selenium, S3, MongoDB, Redis, SQL Server, PostgreSQL, Docker, Kubernetes, Terraform, CI/CD, Protobuf, Power BI, Tableau, and Looker

Senior Data Engineer | BairesDev / Client: BioIntellisense

Jan/2021 – Mar/2026

Developing and evolving a cloud-native platform for continuous patient monitoring (IoT wearable), focused on large-scale data ingestion, processing and analytics.

- Migration from GCP to AWS
- Built real-time and batch data pipelines for IoT health data
- Designed event-driven architecture using Kafka (Confluent)
- Implemented distributed processing with Flink, Dataflow and Databricks
- Built Data Lake architecture on S3 and data transformation pipelines
- Developed APIs and backend services (Python, Java, C#)
- Implemented security practices (OAuth2, IAM, encryption) for sensitive data
- Developed scalable distributed systems for analytics and data delivery

Stack:

AWS, GCP, S3, Kafka (Confluent), Kinesis, Pub/Sub, Flink, Dataflow, Databricks, Lambda, Cloud Run, Python, Java, C#, MongoDB, BigQuery, Redis, Docker, Kubernetes, Terraform, CI/CD, Protobuf, and Avro

Data Scientist | Vitarts / Client: True Tecnologia

Jan/2020 - Dez/2020

Delivered end-to-end data science and data engineering solutions for emergency services and public safety.

- Partnered with stakeholders to define requirements and data needs
- Built ETL pipelines using SQL and Python across multiple data sources
- Developed integrations using APIs, C# microservices and Selenium
- Performed data cleaning, transformation and preparation for analytics
- Applied algorithms for data processing and indexing
- Modeled and loaded data into Data Lakes and Data Warehouses
- Implemented data quality and monitoring processes

Stack:

Python, SQL (SQL Server, PostgreSQL), C#, APIs, Selenium, Data Lake, and DW

BI Analyst & Senior Data Engineer | BairesDev/Client: IPG Mediabrands

Dez/2018 - Dez/2019

Delivered end-to-end BI and data engineering solutions for multiple clients.

- Developed unified reporting solutions for multiple agencies
- Built data ingestion and integration pipelines across multiple sources
- Designed Data Lake and Data Warehouse architectures (ETL/ELT, data marts)
- Created standardized datasets and reports, accelerating client onboarding
- Implemented business rules and custom analytics solutions
- Ensured data quality, monitoring and validation processes
- Transformed data for BI and reporting consumption

- Generated insights to support campaign optimization

Stack:

AWS (S3, Glue, Athena), Apache Spark, Python, and Tableau

Senior Manager | Accenture

2014 – 2015

- Delivered analytics and IoT solutions for enterprise clients
- Designed data-driven solutions and supported pre-sales and RFPs
- Developed analytical models and business insights
- Mentored teams and supported client decision-making processes

Early Career (Consolidated)

2004 – 2014 | IBM, HP, Estácio

- Worked as Project Manager, Solution Architect and BI Specialist
- Delivered large-scale BI and Data Warehouse solutions for enterprise clients (e.g., Petrobras, Vale, Telecom)
- Designed data architectures, integration frameworks and governance models
- Managed cross-functional teams and stakeholders
- Supported executive decision-making through analytics solutions

1997 – 2004 | Shell, Casa&Video

- Initial experience in BI, analytics and logistics systems
- Developed analytical reports and data solutions
- Supported business planning and operational decision-making

Core Skills

- Data Engineering and Data Architecture
- Cloud (AWS, GCP)
- Data Mesh, Data Lakes, Data Fabric, and Data Warehouses
- Streaming and Distributed Processing
- Event-Driven Architecture
- Advanced Analytics and Data Science
- APIs and Backend Development
- Data Governance and Security

Education

- MBA, Strategic IT Management – FGV
- MBA, Integrated Management Systems – UFRJ
- BSc, Systems Engineering – UERJ

Certifications & Courses

- Big Data Specialization (2015)
- Practical Machine Learning
- Practical Predictive Analytics
- Social Network Analysis
