

Vitarts: A Partner for Your Business Growth

At Vitarts, we believe in turning data into actionable insights to drive business success. As a specialized IT consulting company, our expertise extends from strategic planning to implementation and operation of integrated solutions.

Our Mission:

To support our clients in increasing their efficiency and effectiveness through the continuous improvement of their processes via integrated management and business intelligence services and solutions.

Our Vision

To be a benchmark for services and solutions that transform our clients' businesses and operations through faster, simpler, and more economical methods.

Our Values

- Innovation – To act with creativity, intelligence, and talent to identify and apply new methods and solutions, aiming for continuous improvement and capturing opportunities for our clients, employees, and partners.
- Sustainability – To be responsible in conducting our operations, focusing on sustainable growth and achieving the objectives of our business and our clients.
- Ethics – To prioritize the integrity of our reputation, acting with seriousness and honesty in all relationships, whether collaborative or competitive.
- Excellence – To always seek to improve our efficiency and effectiveness through the constant improvement of our services and solutions, providing them with professionalism and quality.
- Partnership – To act with high levels of transparency, aiming for mutual benefit, through relationships of respect, cordiality, and cooperation, building successful relationships between our clients, employees, and partners.

Our Story

Our team of experienced professionals has worked together since 2017, bringing together creative ideas, innovative thinking, and sheer determination. We have the vision to help businesses like yours take off. With a proven track record in delivering results-driven solutions, we are your trusted advisor for any IT-related challenge.

We are proud to offer our expertise as a collaborative partner, leveraging the results-driven approach we take in every project. We believe this unique blend of technical capabilities, strategic planning, and innovative thinking is essential for companies seeking to excel in their business objectives.

Services Offered

We offer a variety of creative services and solutions that enhance the efficiency and effectiveness of your business through the adoption of agile technologies and methods, allowing you to identify the best ideas

and bring them to life. Focusing on opportunities and continuous improvement of your processes and products, we safely reduce the time between action and decision-making. See below for more details on each of our services and solutions:

Consulting Services

Our consulting services help you navigate complex business decisions — whether launching something new or redesigning processes, products, services, or your organization.

Using integrated and interactive methods, we assess your current situation by considering real needs, strengths, weaknesses, and key business drivers. This allows us to identify and prioritize opportunities, shaping them into a clear roadmap that guides solution design and supports continuous improvement.

Our consulting practice covers:

- Strategic planning and roadmap definition
- Business process consulting and BPM
- Data architecture and software engineering
- Systems solution planning and design
- Security, performance, and governance
- Portfolio and project management
- Marketing research and analysis
- Tool evaluation and selection
- Frameworks and methodologies: SWOT, BSC/Strategic Maps, PDCA, and IT/BI/AI Master Plans

Integrated Solutions Implementation

Integrating information systems and maintaining data quality has long been essential — not only to ensure data integrity and consistency, but to eliminate duplicate entries, streamline business processes, and provide a reliable foundation for decision-making.

Today, organizations must bridge modern technologies — including cloud platforms, big data, NoSQL databases, unstructured data, e-commerce, and digital payments — with legacy systems and proprietary applications. The challenge is doing so intelligently, without disrupting existing operations.

Vitarts and its partners design and implement integration architectures tailored to each client's specific needs, leveraging:

- Cloud-native, scalable solutions (AWS and GCP)
- Streaming data processing and event-driven architectures
- Workflow orchestration and pipeline management
- ETL/ELT frameworks
- Web services, REST/GraphQL APIs, and EDI
- Backend engineering in Java, Python, C#, and SQL

Collaboration

Is your company looking to optimize processes by strengthening collaboration among employees? Are you seeking better ways to engage with clients — improving your brand perception and delivering more effective products and services?

Vitarts understands that collaboration solutions go beyond software: they require clear purpose, shared objectives, and measurable outcomes for the organization.

With that in mind, we help integrate collaboration into your core business processes — including creative, feedback, and co-creation workflows — especially in new product and service development, where involving clients, partners, and key stakeholders drives differentiation and better results.

Vitarts supports your collaboration initiatives end-to-end, from strategy and purpose definition through to implementation.

BI, ML/LLM, and AI Agentic Engineering

Support in defining and implementing business intelligence, machine learning, large language model, and AI agentic solutions across strategy and planning:

- Competitive intelligence and market analysis
- Data modeling, KPI definition, and metric frameworks
- Descriptive, predictive, prescriptive, and geospatial analytics
- Forecasting, simulation, and optimization solutions
- Interactive data visualization and dashboarding
- ML/LLM development, fine-tuning, and deployment
- AI agentic workflow design and orchestration

Aiming for Results-Oriented Success

We employ an agile methodology, focusing on measurable outcomes, to deliver value to our clients. This approach ensures that every project meets the client's needs and satisfies their expectations.

Testimonials from Clients

Marcelo is a highly skilled consultant with technical capabilities in Business Intelligence. He is an excellent communicator who effectively bridges the gap between internal stakeholders and clients.

A business-oriented individual like Marcelo combines his exceptional technical expertise with strong analytical skills and an eye for details, ensuring success in both personal and professional endeavors.
